Scout Cloud Gateway

Datasheet

Datasheet: Scout Cloud Gateway (SCG)

Overview

SCG is an integrated solution that enables companies to quickly and securely connect end point devices operating in remote, distributed environments without the need of a separate VPN.

Empower your remote workforce

SCG enables Scout to manage eLux client devices that are used outside the corporate network. Once authenticated the end point devices can be managed dynamically from the intranet as well as the internet.

Feature highlights

Built-in VPN backend

Devices of remote, home office and mobile workers can securely connect to Scout end point management without the need for a separate VPN backend.

Scale your remote footprint

SCG enables companies to grow their remote footprint by enabling connections for up to 3000 devices per SCG instance that are out of the corporate LAN.

Dynamic secure access

First time users need to authenticate via Active Directory, Identity Provider, or access tokens enabling local IT to manage access to remote devices and end points with ease.

Seamless rollout

IT administrators can manage end point devices and peripherals avoiding complicated, complex, and fragmented multi-vendor, multi-platform scenarios saving time and effort.

Save time and costs

SCG establishes a secure connection between the end point device and the Scout Management solution eliminating the need for an expensive and dedicated VPN connection.

Anytime, anywhere work

SCG helps local IT streamline operations and meet business needs as well as user demands quickly in home office, remote or mobile work scenarios. Businesses can deploy digital workspaces in a lean, efficient manner.

Secure digital workspaces

Deliver a secure, stable and consistent experience to a diverse, distributed and remote workforce. Local IT can remotely manage access to end point devices operating out of the corporate LAN.

Business continuity

Administrators can deploy digital workspaces to leverage rapidly evolving cloud platforms, enabling business continuity and operational agility.

Why Unicon?

Our solutions power over 2 million end point devices daily enabling large enterprises and small- and medium-sized businesses to:

- Scale, manage and secure their end points
- Get started on their cloud journey
- Deploy digital workspaces with ease
- Streamline IT operations and budgets
- Extend the life of end point devices
- Growing ecosystem of partners in VDI, DaaS
- Migrate from fat client to lean IT end-point infrastructures
