Datasheet

# Datasheet: Scout and Scout Board

## Overview

Scout is a robust, lean endpoint management solution for devices running eLux. Scout is ideal for large enterprises, small- and medium-sized businesses using VDI or DaaS environments that want to scale, manage, secure, and deploy a consistent user experience.

## Lean endpoint management

Scout enables companies of all sizes to simplify management of their ever-growing, endpoint infrastructures in complex virtualization environments with an easy-to-use, intuitive management solution.

## Feature highlights

### Device diversity

Administrators can easily organize extremely diverse and complex end point infrastructures, planning and managing such scenarios in companies that are starting out and want to scale up their end user computing.

### Easy and intuitive

IT administrators in large enterprises can manage, monitor, and track large fleets easily while small- and medium-sized businesses can scale securely without worrying about the complexity that sets in over time.

### Granular configuration

Administrators can update the endpoint device firmware in a modular manner ensuring higher flexibility, eliminating the need of complete OS upgrades from a scratch that usually end up overwhelming corporate networks.

### Scaling securely

Using Scout, administrators get a 360° view and reports of the endpoint landscape they are managing and the individual customizable structures for optimal client management.

### Build greater efficiency

Scout helps IT streamline daily operations and meet business needs, end user demands quickly in office, remote office or mobile work scenarios.

### Business agility

Business agility depends on IT being able to support traditional office scenarios, hybrid work settings and different working such as task, knowledge and power users.

### Lean management

Scout works best with endpoint devices running eLux making it a win-win for companies that want avoid time consuming OS upgrades, reduce complexity in their VDI environments and centralize IT operations in a lean manner.

### Save time and effort

IT administrators can manage endpoint devices and peripherals avoiding complicated, complex, and fragmented multi-vendor, multi-platform scenarios saving time and effort.

### Modern UI / UX

Scout Board offers a streamlined UI and cutting-edge technology for effortless device management, featuring dashboards and advanced filtering for smooth navigation, delivering enhanced efficiency and ease to admins.

### Web-based

Admins benefit from effortless deployment and access with Scout Board, a web-based platform accessible through any web browser, providing seamless device management capabilities.

# Why Unicon?

Our solutions power over 2 million endpoint devices daily enabling large enterprises and small- and medium-sized businesses to:

- Scale, manage and secure your endpoints.
- Get started on your cloud journey.
- Deploy digital workspaces with ease.
- Streamline IT operations and budgets.
- Extend the life of endpoint devices.
- Growing ecosystem of partners with VDI, DaaS, and Browser Computing.
- Migrate from fat client to lean IT endpoint infrastructures.
